## TARGET DATE FUNDS

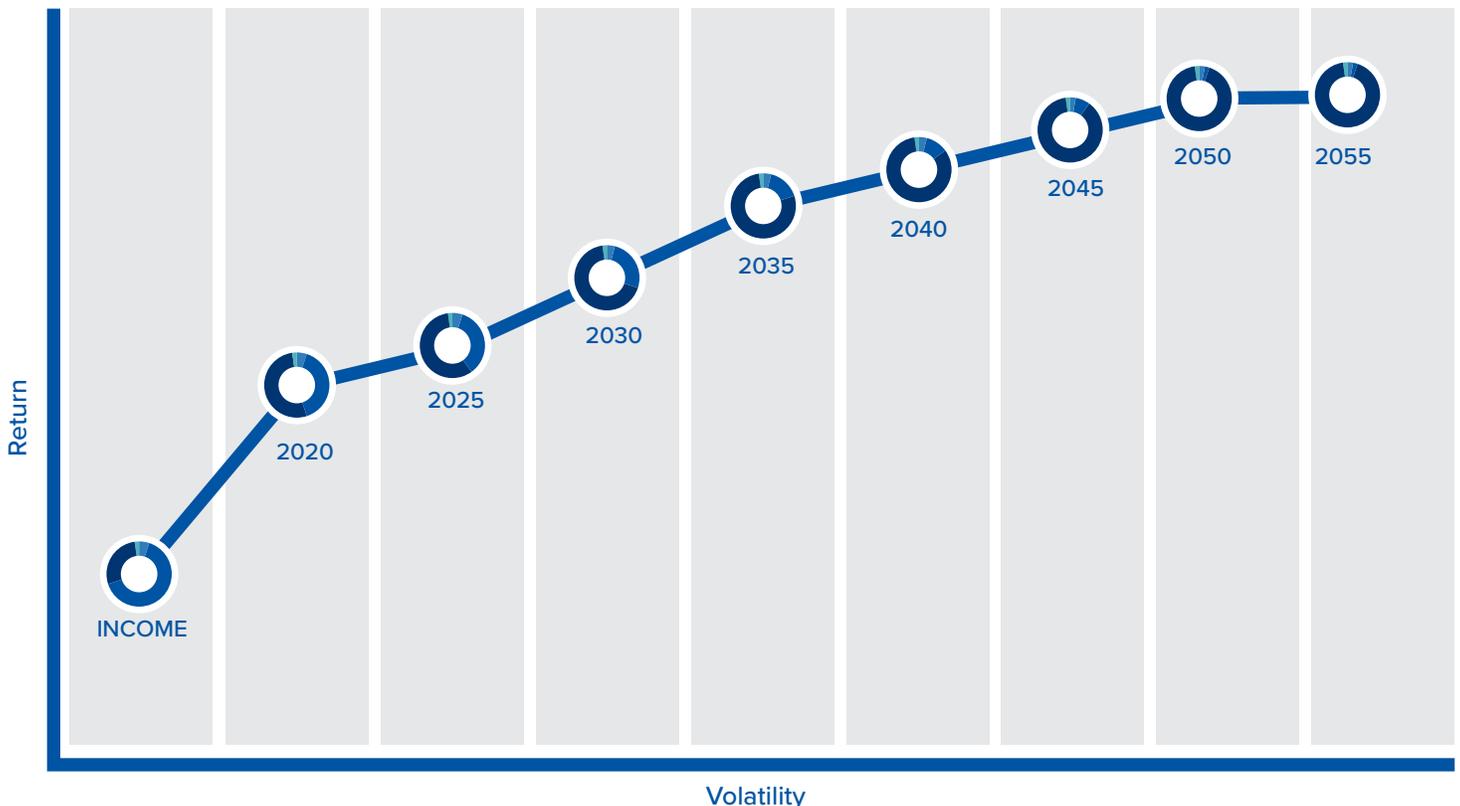

### A savvy investment option built for your clients' busy schedule

SmartSeries offers the simplicity of a complete portfolio in a single fund. Your clients simply need to set their savings goal (no dream is too big!) and let SmartSeries get them there. By choosing the fund with the target date closest to the year they expect to reach their goal, the fund's investment mix becomes more conservative, minimizing risk as the target date approaches.

#### How does it work?

Based on the target date closest to the year your clients plan to achieve their goal (i.e., retirement, new home, cottage, and so on) SmartSeries follows a glide path that adjusts the underlying mix of investments and volatility over time.

#### Volatility vs. Return

■ Cash and Equivalents ■ Total Fixed Income ■ Total Equity ■ Alternatives

This document's purpose is to illustrate and help explain the relation between the level of short-term volatility and potential return of Assumption Life's segregated funds. It does not guarantee in any way future performance of the funds. Each fund's return and volatility level vary constantly and are not guaranteed. Therefore, this document does not always reflect the actual return and volatility level of the funds. This document alone should not be used to determine a client's investment strategy.

It is strongly recommended that the client's various investments both with Assumption Life and elsewhere be taken into consideration when analyzing his/her asset allocation. This will ensure that the client's total asset allocation is properly aligned with the recommended asset allocation for his/her life cycle and risk tolerance.

## Benefits for the client
